

INDEX-VOLUME 1A

Note: Page numbers followed by “f” and “t” indicate figures and tables respectively

A

ABARES. *See* Australian Bureau of Agricultural and Resource Economics and Sciences

Accelerated economic growth

- CGE model, large, 121
- economy specific characteristics, 122
- equilibrium effects, 123–124
- government expenditures, 121–122
- OECD method, 121
- productivity growth, 124
- public debt services, 122
- TFP index, 122–123, 123t
- wage rate adjustments, 122

ACOR. *See* Average capital-output ratio

Add-on VAT, 774–775

aid-hd scenario, 260

- Dutch Disease effect, 266
- foreign transfers in, 264
- growth acceleration in GDP, 264–265
- poverty rate, 265

aid-infra scenario, 260

- Dutch Disease effect, 266
- foreign transfers in, 264
- infrastructure, 265
- poverty rate, 265

AK model. *See* Auerbach and Kotlikoff model

Alternative Minimum Tax (AMT), 782, 797–798

AMOS model, 401

- alternative labor-market closures, 403
- regional CGE models, dynamics, 403–404

AMT. *See* Alternative Minimum Tax

- for GEMPACK users, 70–71

Applications, CGE model

Armey-Shelby proposal, 731

Armington specification, 46–47

Arrow-Debreu general equilibrium model, 282–283

Auerbach and Kotlikoff model (AK model), 747, 749, 750t

- adding human capital, 753–755
- adding international flows, 755
 - CBIT, 756
 - mobile capital and tradable goods, 755
 - using OLG-CGE framework, 755–756
- Engen and Gale model, 752–753
- financial markets explicit calculation, 752

firm values explicit calculation, 752

Fullerton and Rogers model, 749

- consumption goods, 749
- flat rate consumption tax, 751
- fundamental tax reforms, 751
- lifetime income distribution, 749–751
- myopic expectations, 750
- production goods, 749

income groups and perfect foresight, 751

Flat Tax effects, 752

X-Tax, 751

Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES), 554

Australian Bureau of Infrastructure, Transport and Regional Economics (BITRE), 599

Average capital-output ratio (ACOR), 235–236

B

Back-of-the-envelope model (BOTE model), 5–6, 435–436, 612

change in spatial distribution of domestic demand, 457–467

long-run

- closure, 444–445
- parameter and coefficient values, 436, 440t
- regional aggregate demand, 448–449
- regional aggregate supply, 447–448
- and short-run closure differences, 444–445
- regional labor-saving technical change, 449–457
- regional macroeconomic relationships, in MMRF, 436, 437t

short-run

- closure, 443–444
- and long-run closure differences, 444–445
- parameter and coefficient values, 436
- regional aggregate demand, 446–447
- regional aggregate supply, 445–446
- variables, 436, 438t

Base case, 582

electricity modeling, 602

for ETS simulation, 582

for MMRF, 582–583

projections for electricity generation sent out, 596–597, 597f, 598t

Base case (*Continued*)

- projections for emissions by source in, 593–596, 594t
- projections for macroeconomic variables, 583–585
 - export and import volumes, 583–585, 584f
 - real GDP and national private consumption, 583, 584f
 - trade terms, 584f, 585
- projections for national industry production, 587f
 - air transport, 591
 - average growth prospects, 592–593
 - electricity generation–other renewable, 586–588
 - forecasts for agricultural sector, 592
 - gas mining and coal mining, 592
 - projected growth in overall electricity supply, 590
 - projections of growth of softwood plantations, 591
 - rail freight transport, 591
 - rail passenger transport, 591
 - weak growth prospects, 592
- Base scenario, 241–242, 261
 - economy evolution, 262
 - government consumption of education and non-education services, 261
 - government fiscal account, 261
 - growth, 262
 - growth rates in real GDP, 261
 - MDG targets and paths, 264f
 - Yemen simulation results, 263t
- Base-broadening, rate-reducing reforms (BBRR reforms), 758
- BBRR reforms. *See* Base-broadening, rate-reducing reforms
- BEA. *See* Bureau of Economic Analysis
- Bequests, 792
- Biases, 13
- BITRE. *See* Australian Bureau of Infrastructure, Transport and Regional Economics
- BLS. *See* Bureau of Labor Statistics
- BOTE model. *See* Back-of-the-envelope model
- FEDERAL model, 399
 - Liew's model, 398
 - MMRF, 400–401
 - MRSMAE, 398
- Bradford's X-Tax, 661
- Bureau of Economic Analysis (BEA), 27, 71–72
- Bureau of Labor Statistics (BLS), 78

C

- Capital effect, 39
- Capital income, 798
- Capital income tax add-on
 - to Flat Tax effects, 765, 767–768
 - capital income tax, 765–766
 - to Flat Tax reform, 767, 767t
 - current federal income tax system, 766
 - FT and AT plan, 766
- Capital services, 669–670
- Capital-labor-energy-materials-services datasets (KLEMS datasets), 13
- Carbon capture and storage (CCS), 574
- Cass-Koopmans theory, 478–479
- CBIT. *See* Comprehensive business income tax
- CCS. *See* Carbon capture and storage
- Centre of Policy Studies (CoPS), 25, 554
- CES. *See* Constant elasticity of substitution
- CET. *See* Constant elasticity of transformation
- CEX. *See* Consumer expenditure survey
- CGE model. *See* Computable general equilibrium model
- CGE modeling. *See* Computable general equilibrium modeling
- Change and percentage change equations, 65–66
 - optimization problems, 66–67
 - rules for, 66t
 - variants in equations, 67
- Cholesky factorization, 695
- Climate policy evaluation
 - allowance price, 527, 528f
 - banking emission allowance effect
 - allowance prices, 544, 545f
 - borrowing allowances, 543
 - household welfare effects, 548, 548f
 - industry effects, 544–545, 547t
 - macroeconomic impacts, 544, 546t
 - safety-valve pricing, 544
 - cap- and-trade policy, 526–527
 - distributional impact
 - full wealth, 539, 539f
 - household welfare effects, 539, 539f, 540f, 543t
 - household welfare effects decomposition, 541, 541f
 - emissions abatement, 528
 - greenhouse gas emission, 527, 527f
 - IGEM model, 529
 - impact on economic growth and industry
 - emission demand, 538, 538f
 - industry effect, 529, 532t
 - macroeconomic impact, 529, 530t
 - output and price changes, 529, 533f
 - price-induced technical change, 534, 535f
 - real final demand, 529, 531f
 - real GDP, 537, 537f
 - real value added, 531–533, 534f
- Closed-economy model, 21
- Commodity groups, 668
- Commonwealth Scientific and Industrial Research Organization (CSIRO), 599
- Composite consumption good, 793–794
- Comprehensive Africa Agriculture Development Program (CAADP), 293
- Comprehensive business income tax (CBIT), 756
- Computable general equilibrium model (CGE model), 277–278, 744

- application, 278
- application domain, 282–285
- characterization, 289–290
 - change directions, 290
 - comparative analysis across countries, 290
 - evidence to nourish public debate, 290
 - measurement, 289–290
- equilibrium and domain type models
 - applicability domain, 284
 - Arrow-Debreu general equilibrium model, 282–283
 - dynamic recursive models, 283
 - forward-looking models, 283
- estimation and validation, 285
- general equilibrium model
- policy analysis modes, 286
 - dated comparative statics, 287
 - dated-dynamic model, 289
 - dated-static run, 288
